产品特征 Product Feature

放料阀有Y型及角式两种结构形式，根据实际工况的需要，放料口的形式设计有带管接、冲洗口、长筒及平底等四种形式，阀体内腔装有耐冲刷、耐腐蚀的护板，在开启阀门瞬间，可以保护阀体不被冲刷、腐蚀，并对其整体进行特种表面处理，使表面硬度达到HRC50~55，具有高耐磨、耐腐蚀的优良功能。阀座密封面与阀瓣密封面均堆焊有硬质合金，密封副采用线密封，保证密封，保证密封的可靠性，并可防止结巴。阀门设有防转机构，保证阀杆在开启和关闭时只做直线运动，不做回转运动。阀门驱动方式有：手动、齿轮、电动和气动。

FREE-Valve's Tank Bottom Angle Valves have two constructions: Y type & angle type, the tank bottom angle valve entry are mainly divided into four types: pipe-connecting ,washing port, lengthened stem and flat bottom. An anti-washing and anticorrosion protection plate is set carry out chemical Ni. P plating treatment on the whole valve which makes the surface hardness reach HRC50~55. The sealing adopts spherical seal, the surface of which is line connecting. This can ensure the sealing reliability and avoid scabs. Moreover, a rotation resistant device is set up to ensure that the valve stem only has straight line motions, and no revolving motions. The driving manners of the valve include hand driving, electric, pneumatic operated and multi-turn gear actuator.

应用范围 Applications

放料阀是一种用于储罐和其它容器底部排料，借助于阀门底部法兰或管接焊接于储罐和管道上，因此放料阀可消除工艺介质在容器出口处的残留现象。放料阀广泛应用于石油化工、氧化铝、钢铁、矿业、制药、精细化工和选矿等领域。

FREE-Valve' s Tank Bottom Angle Valves are at the bottom of the tanks or other containers for emptying material, with the aid of the flange at the bottom of valve or the pipe joint welded to the bottom of the tank or pipe connector , so tank bottom angle valve can eliminate process medium in container at the bottom of the tank.
Tank bottom angle valves are widely used in the petrochemical industry, alumina industry, steel industry, polymer, mining industry, the pharmaceutical and fine chemicals, and mineral processing industries.

产品结构特征 Products Design Features

直通式料浆阀特点：阀门采用Y型直通式Z结构，流阻小，不容易结疤。阀体可设计成整体式或者分体式两种结构。分体式阀体分为左右阀体，两阀体之间夹有阀座，维修时只需拆开两阀体的螺栓就可清洗或修理，若有损坏的零件也可以及时更换。阀体内腔受冲刷较严重的部位可设计经过硬化处理的保护衬板，在阀门开启时，可以保护阀体不被介质冲刷、腐蚀，从而大大地提高了阀门的使用寿命。密封面之间堆焊硬质合金，硬度高，阀瓣采用球冠形密封面，阀座选用一个极小平面的锥形密封面。这样，在阀瓣与阀座密封时形成一种类似线密封的密封形式，密封效果好，并具有防结疤的功能。阀门带有上密封结构，全开时可以保护填料，阀门导向装置设置在阀体外部，不与介质接触，防止了导向部位卡死现象的发生（如闸阀）。

Feature of slurry valve :
Y type cut through structure is employed to make low flow resistance and difficult to scale .The valve body can composed of left body and right body ,equipped with valve seat in the joints of both bodies .The bolts of both bodies can be taken apart for cleaning, repair and replacement when maintained .The protection plate with hard alloy is equipped at the position injured hardening treatment in the wash of the body inner, with which can prevent the body from the scour & corrosion of medium when opening the valve so as to prolong service life of the valve .Hard alloy is bead welded between the sealing surfaces ,which features high hardness, in which sphere sealing surface is adopted for the disc while cone -shape sealing surface with ultra-small surface for the seat ,thus one kind of linear sealing (enjoys excellent sealing effects) is formed between the disc & the seat, additionally ,it can also prevent from scabbing .Due to its upper seal ,it can protect from filling when full open ,equipped steering device at the body outside ,in which has no contact with the medium ,so as to avoid block at the steering parts like gate valve
